

EUROPEAN CENTRE FOR RISK MANAGEMENT AND SAFE INNOVATION
IN NANOMATERIALS & NANOTECHNOLOGIES

Survey: Identifying knowledge tools and services safely manage nanotechnology

Industry

This short survey contains a set of questions about the following:

- Further identification on the type of company you represent.
- Whether or not you work with nanomaterials/nanotechnology or intend to start doing so in near future?
- Whether you have concerns for specific various aspects of the safety of nanomaterials/nanotechnology?
- Whether your company/organisation undertakes activities to solve the issues about the safety of nanomaterials/nanotechnology and whether you commission help and support from other organisations to do this?
- Whether or not you use tools or services to help you assess the safety of nanomaterials/nanotechnology?
- The needs that you have to implement nanomaterials/nanotechnology safely in your business in terms of testing, measuring, certification, guidelines, protocols, standards, shared databases, consultancy, training, reference values, models, software.
- Whether you would like as an individual, or organisation, to become involved and support the work of the EC SafeNano centre?

The Industry survey is built as regard to production perspective, but we would highly appreciate workers to also participate to the survey and obtain insight in their needs too. So, if you are a worker, please describe 'your role in your organization' as worker or employee'.

Before you complete the survey you may wish to consult your work colleagues who are also involved with the safety of nanotechnology to address some of the questions in this survey.
